Art Unit: 1625

DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 29, 2010, has been entered.

2. Claims 1-13, 24-30, and 32-43 are pending in this application.

Claim Objections

3. Claim 3 is objected to because the word "or" is missing from the last combination. Claim 4 is objected to because of the presence of repeating commas in line 3 on page 5 and line 2 on page 6. Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. §103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-13, 24-30, and 32-43 are rejected under 35 U.S.C. §103(a) as being unpatentable over U.S. Patent No. 6,492,393 to Breitfelder *et al.* and U.S. Patent No. 7,202,244 to Boyle *et al.*, in view of Silverman.
- 6. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.

Art Unit: 1625

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Breitfelder '393 teaches compounds of formula I below

where G is a saturated or unsaturated mono or bicyclic carbocycle or heterocycle; X is O or S; Ar is phenyl, naphthyl, quinolyl, tetrahydroquinolyl, and several others; L is a carbon chain, which may include O, N, and/or S, and which may include oxo-substitution on carbons in the chain; and Q is an optionally substituted phenyl, naphthyl, pyridyl, and numerous other cyclic moieties. Possible substituents for Q include C_{1-6} alkoxy. Breitfelder teaches that such compounds have activity as inhibitors of cytokine production (i.e., in a cell signaling pathway) and are potentially useful in treating many diseases.

8. Claim 1 is directed to a compound of the formula shown below

where A is a bicyclic heterocycle; B is phenyl, naphthyl, or pyridyl; L is $(CH_2)_{0-4}$ - O_{0-1} - $(CH_2)_{0-4}$; $(CH_2)_{0-4}$ - $(CO)_{0-1}$ - $(CH_2)_{0-4}$; $(CH_2)_{0-4}$ - $(CO)_{0-1}$ - $(CH_2)_{0-4}$; $(CH_2)_{0-4}$ - $(CONR^3)_{0-1}$ - $(CH_2)_{0-4}$; $(CH_2)_{0-4}$ - $(CH_2)_{0-4}$; or a single bond; M is pyridine, and Q is a substituent which may be an ester, ether, aldehyde, carboxylic acid, or amide group. Note than M corresponds to Q in Breitfelder '393. Dependent claims 22-12 narrow the possibilities for ring A and linking group L. Claim 13 is directed to pharmaceutical compositions. Claims 24-30 encompass the subgenus where B is phenyl. Claim 32-43 encompass the subgenus where B is

Art Unit: 1625

quinolyl. The asserted utility is activity in cancer therapy, based on activity in the ras signal pathway.

- 9. But for the options, in the present case, i) that B may be pyridine and ii) that terminal ring M (corresponding to Q is Breitfelder '393) may bear an ester, aldehyde, carboxylic acid, or amide group, the genus of claim 1 would fit entirely within the genus taught by Breitfelder.
- 10. Specific compounds taught by Breitfelder include i) about 40 compounds with the core G-NH-CO-NH-naphthyl-linker-pyridine (*e.g.*, col 45, cpds 1 and 2, col. 47, cpd 1, col. 53, cpd 1, col 55, cpds 1.4, col. 59, cpds 1,2,3,4, col 61, cps 1,2,3,4, col. 63, cpds 2,3,6, col 67, cpd 1, col 69, cpd 5, col 63, cpds 2,3,6, col 71, cpds,5, col 73 cpds 2,3,4), ii) many compounds with

[bicyclic heterocycle]-[NH-CO-NH]-[naphthyl]-[O-(CH₂)_n-]

(cols 37, 39, 41, and 51), including one with Q = pyridine (col 53, 1^{st} compound); and iii) several compounds with B = tetrahydroquinolyl and Q = pyridine (col 67, cpd,5, col 69 cpds 1,2, col 71 cpd 5, col 73 cpd 5,); a great many with the structural element

[bicyclic heterocycle]-NH-CO-NH-naphthyl-O-(CH₂)_n-

such as the first compound shown in col 53; several compounds of the type

[bicyclic heterocycle]-NH-CO-NH-naphthyl-O-(CH₂)_n-saturated heterocycle

(col 39, compounds 3 and 5, col 41, compound 1), and many compounds of the type

[phenyl/pyridyl]-NHCONH-[naphthyl/tetrahydroquinolyl]-O-(CH₂)_n-pyridine

(col 67, all 5 compounds, col 69, all 6 compounds, col 71, all 6 compounds; col 73 all 5 compounds; col 75 all 6 compounds).

11. In summary, among the compounds taught by Breitfelder '393, a large number have at least four of the five core subunits claimed in generic claims of the present application: A = bicyclic heteroaryl; NHCONH; B = phenyl, naphthyl, (tetrahydro)quinolyl; L = carbon chain and/or –O- and/or CO or NHCO; M = pyridine.

Art Unit: 1625

Moreover, Boyle '244 teaches phenyl pyridyl ureas, phenyl pyrimidyl ureas, and phenyl diazinyl ureas, as well as quinolyl ureas as chk-1 inhibitors, for example at col. 9 lines 60-65, col 17, lines 50-65, col 18, lines 5-15, and col 18, lines 45-54 (quinolyl).

- 13. Silverman p. 32 teaches that phenyl and pyridyl are isosteres. Moreover, if phenyl and pyridyl are isosteres, then their benzo-fused analogues, naphthyl and quinolyl are also isosteres.
- 14. Given the very common technique in the art of drug discovery of structure variation, the known isosteric properties of phenyl/pyridyl and nathphthyl/quinolyl/isoquinolyl (see Silverman excerpt), and the objective of maximizing activity against enzymes in cellular signaling pathways, it would be obvious to merely vary the combinations of the structural elements taught by Breitfelder '393 and also to augment these elements with the pyridyl-urea element taught by Boyle '244 to produce the claimed invention.

Conclusion

15. No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Heidi Reese, whose telephone number is (571) 270-5277. The examiner can normally be reached on Monday-Friday 8 AM - 5 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janet Andres, can be reached on (571) 272-0867. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
